Diabetes Mellitus	24.4
Alzheimer's Disease	21.7
Intentional Self-Harm (suicide)	10.7
Nephritis, Nephrotic Syndrome, & Nephrosis	14.3
Infant Mortality	6.8

Notes:

1 Only one year of U.S. data are given to compare with five years of state and county data because the numbers on the national level are much greater and do not fluctuate as much annually.

2 The U.S. percent of mothers receiving care in 1st trimester is based on 41 states. Due to lack of comparable data from the remaining states.

3 Data for mothers who used tobacco or consumed alcohol while pregnant are self-reported. The U.S. percent of mothers who used tobacco in 2004 is based on 41 states. Due to lack of comparable data from the remaining states.

4 The fertility rate is all births per 1,000 females age 15-44.

5 Teenage pregnancy rate is live births, fetal deaths, and abortions per 1,000 females age 15-17. The U.S. teenage pregnancy rate is from 2000.

6 The mortality rates, except infant mortality are age-adjusted death rates per 100,000 population. Age-adjusting to the standard million population eliminates differences between populations, making them easier to compare. Infant mortality is calculated as the number of infant (less than one year old) deaths per 1,000 live births. The U.S. mortality age-adjusted rates are 2004 provisional data except for female breast and prostate which are from 2003.

Potter County

Demographic Information

Potter County is located in north central South Dakota and averages 3.1 persons per square mile.

2000 Population Information

Population	2,693
Percent White	98.1%
Percent American Indian	1.2%
Percent Age 65 or Over	25.0%
Percent Age 4 or Under	4.5%

Socioeconomic Indicators

Population Under 100% of Poverty	331
Percent of the Population	12.6%
Population Under 200% of Poverty	971
Percent of the Population	36.9%

¹All rates based on population are calculated according to the 2000 U.S. Census.

²Data for mothers who used tobacco or consumed alcohol while pregnant are self-reported.

³Fertility rate is all births per 1,000 females age 15-44.

⁴Teenage pregnancy rate is live births, fetal deaths, and abortions per 1,000 females age 15-17.

⁵All mortality rates except infant mortality are age-adjusted death rates per 100,000 population. Infant mortality is the number of infant (less than one year) deaths per 1,000 live births.

See Technical Notes for more information.
